NGM2611-E13

Product code: NGM2611-E13
Manufacturer: Figaro Engineering Inc.

The NGM2611 is a pre-calibrated module for natural gas alarms which is precisely calibrated in Figaro's humidity and temperature controlled facility. The module uses TGS2611-E00 which incorporates a filter to eliminate the influence of interference gases such as alcohol, resulting in highly selective response to methane.

The most important process in manufacturing reliable residential gas alarms is adjusting the alarm point. Calibration is a complicated and time consuming process which also requires a substantial investment in calibration equipment. By eliminating the costly calibration process, this module enables users to easily and simply manufacture residential natural gas alarms

Application field	Industrial
Heater consumption	56 mA
Measurement range	500-10.000 ppm
Target Gas	Methane
