

IS/5/U

Product code: IS/5/U

Manufacturer: Solartron

The IS / 5 / U is an LVDT guided with universal joints characterized by internal electronics.

The S series of displacement Transducers is the culmination of many years' experience gained from Solartron metrology's highly successful mach One range plus careful note of market feedback. The result is a totally new range of trasducers that is better able to satisfy today's demanding manufacturing and research applications.

It has a stroke (mm) of 5.

Optimal in the areas of transport, energy, hydraulics and oleodynamics and in various industrial applications in the field of automation.

Electronics	Integrated
Measurement range	5 mm
Typology	Analogic
Output	Current
Version	Guided core carrier with universal joints (U)
