

KB3725

Product code: KB3725

Manufacturer: Shinkoh electronics

KB3870 photointerrupter consists of an infrared LED and a Light-modulation Photo IC

Its main features are:

- Distance between emitter and detector can be set up to 2 meters;
- Resistance to ambient light;

This photointerrupter is ideal for:

- Position detection at automatic line;
- Detection of human passage, at gate etc.
- Object passing for amusement machines;

Dust Proof	Si
Gap	2 meters
Mounting	Cable
Output	Analog output
Output type	Open collector
